DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim subject matter regarded as the invention (note specification p.3 1st paragraph).

3. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: structural limitations by which the apparatus is made "oscillation insensitive". In light of specification at page 7 to p.8 lines 13-16: how do non-massive housing walls cause an oscillation-free arrangement? Are lines 17-18 intended to specify that it is the use of rigid plate (8) that prevents the oscillations from transmitting through housing (1) and then through the lateral housing walls to scanning unit (7)?

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kaul et al.

(,276) col. 6 lines 52-54.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being obvious over Huber (,336).

Huber discloses a linear position measuring system as claimed, except without expressly disclosing a rotary configuration. However, it is notoriously well-known to one of ordinary skill in the art to move a grating relative to another grating to measure position, and to adapt a linear configuration to a rotary/disk configuration. As to claim 11, note col. 5 line 57.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Renner et al. (,027) Fig. 12 and Fig. 20 disclose using a grating on a disk as an alternate embodiment of rotary position measurement; note col. 2 lines 40-44, col. 21 lines 6-9. Also as to claim 9, note teaching of etching a grating at col. 13; as to claim 10 foil, col 12 line 62. Matsuura (,219) col. 1 lines 61-67 and Figs. 20A and 20B show that both moiré (geometrical) and diffractive (interferential) uses of grating position encoders are well known. Ishizuka et al. (,296). Holzapfel et al. (,539) col. 2 lines 28-42. Michel et al. (,418).

9. Applicant is advised of possible benefits under 35 U.S.C. 120, wherein an application for patent filed in the United States may be entitled to the benefit of the filing date of a prior application. Holzapfel (5,428,445), incl. Fig. 16.
